Paradigm

In search of understanding things in their essence and causes, reflecting on the generation of knowledge.

Various perspectives to conceive, develop, and evaluate scientific processes and epistemological trends.

Seeking new knowledge that answers questions about our reality.

Scientific production, as a social process, has scientific communities as its protagonists, highlighting the relevance of epistemology in this context.

Guided towards scientific production, finding justification and validity in answers; enabling understanding of our disciplinary actions and better consolidating our thought structures.
