

Cyberspace and emerging research: a trans-epistemic and trans-dialogical vision from complexity

<https://doi.org/10.59654/ncd55z06>

Gregth Raynell Hernández Buenaño

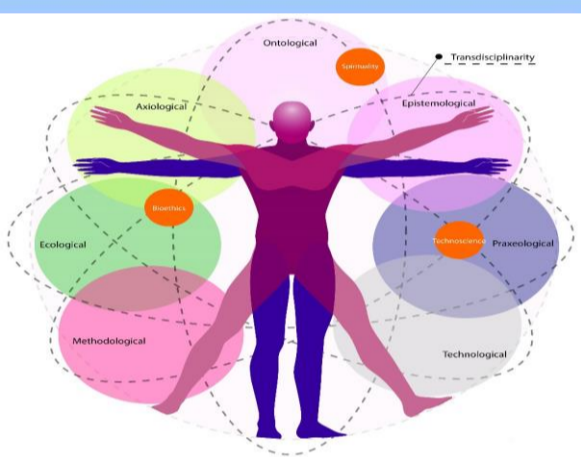

Paradigmatic migration

The journey to digitality reflects various waves in the man-technology relationship, creating new research spaces.

Emerging cyberspace

Cyberspace frees the researcher from traditional structures. It involves research singularities.

Emerging state of the art

A new state is introduced with other study perspectives such as technological and ecological.

Research ethics

It involves a broad ethical exercise that acknowledges the levels of cyberspace.

Insurgent Narrative

Promotes a perspective in progress to view digital reality from a transdisciplinary recognition.

Paradigmatic detachment

Under transcomplexity, it grants new freedoms and challenges for the original construction of research, overcoming conventional methods.
