What are the technological tools used for the integration of ICT in the teaching process?

Introduction

With the digital age, the use of technologies in all areas of daily life, including education, has become more frequent, as there are many technological tools that can be used both inside and outside the classroom.

Offline

Using mobile devices, computers, and tablets as technological tools to view videos, software, and educational games, slides, infographics, and multimedia content.

With the use of the Internet

- Moodle y Classroom.
- Interactive courses, multimedia content, virtual libraries, online training, software, and educational games.
- Social networks allow for conducting workshops and personalized tutoring. Additionally, dialogues for educational purposes between peers.

Conclusions

Students know various technological tools, but they are not timely addressed by teachers. These tools assist in collaborative work, self-learning, research, critical thinking, developing creative skills, and actively participating in the development of the class.
